Description	Potent, selective $\text{Ca}_v2.2$ (N-type) channel blocker
--------------------	---

Biological Data

Biological description	Conotoxin GVIA is a peptide neurotoxin which is a potent, selective and partially reversible $\text{Ca}_v2.2$ (N-type) calcium channel blocker ($\text{IC}_{50} = 0.15 \text{ nM}$). ω -Conotoxin GVIA binds the $\text{Ca}_v2.2 \alpha 1$ subunit ($\alpha 1\text{B}$).
-------------------------------	---

Conotoxin GVIA inhibits presynaptic $\text{Ca}_v2.2$ channels, reduces glutamate release and irreversibly blocks synaptic transmission.

It also attenuates (RS)-3,5-DHPG-induced LTD (long term depression).

It shows antinociceptive action and attenuates hyperalgesia and allodynia.

Conotoxin GVIA is active in vivo.
