DATASHEET

CNQX disodium salt

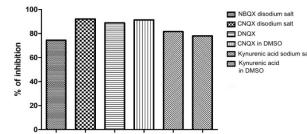

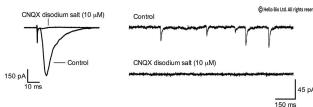

Product overview

| | |
|-------------------|---|
| Name | CNQX disodium salt |
| Cat No | HB0205 |
| Biological action | Antagonist |
| Purity | >98% |
| Customer comments | <i>The CNQX is going fine ! Verified customer, IBPS, Inserm, CNRS</i> |

It works exactly as it should! Dissolved in water, kept in aliquots in -20 freezer. Verified customers, SickKids (University of Toronto)

| | |
|-------------|--|
| Description | Potent, competitive AMPA / kainate receptor antagonist. Disodium salt. |
|-------------|--|

Images

Biological Data

| | |
|------------------------|---|
| Biological description | CNQX disodium salt is a water soluble, potent and competitive AMPA and kainate receptor antagonist. CNQX also antagonizes NMDA receptors at the glycine site. |
|------------------------|---|

CNQX increases GABA_A receptor spontaneous postsynaptic currents (sPSCs) and also shows neuroprotective actions.

CNQX also available.

| | |
|-------------------|---|
| Application notes | The AMPA receptor antagonist CNQX disodium salt is commonly used at concentrations of 10 μM to inhibit the actions of glutamate acting on AMPARs. |
|-------------------|---|

CNQX disodium salt from Hello Bio reduces both spontaneous and evoked EPSCs in cortical neurons at concentrations of 1 μM with full AMPA receptor blockade at 10 μM (see Fig 1 above).

#Protocol 1: Evoked and spontaneous excitatory post synaptic currents (EPSCs)

Biological description

CNQX disodium salt is a water soluble, potent and competitive AMPA and kainate receptor antagonist. CNQX also antagonizes NMDA receptors at the glycine site.

CNQX increases GABA_A receptor spontaneous postsynaptic currents (sPSCs) and also shows neuroprotective actions.

CNQX also available.

- Whole cell voltage clamp recordings were obtained from layer V neurons of the mouse prelimbic cortex brain slice.
- EPSCs were evoked via a stimulating electrode placed in layers II/III delivering a single square (150 μ s) pulse every 10 sec at an intensity that gave a reliable EPSC.
- Neurons were held at -70 to -60 mV (the reversal potential of GABA currents). EPSCs were continuously stimulated and recorded in response to 5 min applications of varying concentrations of CNQX disodium salt until complete receptor inhibition.
- Spontaneous EPSCs were recorded before and after addition of CNQX disodium salt by holding the neuron at -70 mV and recording for 10 sec.
- Recordings for EPSCs were made in the absence of GABA_A-R antagonists.

Solubility & Handling

Storage instructions

Room temperature (desiccate)

Solubility overview

Soluble in water (20mM)

Handling

Hydroscopic solid, contact with air may cause material to change colour and become sticky. Product performance should not be affected but we recommend storing the material in a sealed jar.

Important

This product is for RESEARCH USE ONLY and is not intended for therapeutic or diagnostic use. Not for human or veterinary use.

Chemical Data

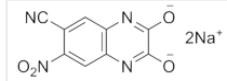

Chemical name

6-Cyano-7-nitroquinoxaline-2,3-dione disodium

Molecular Weight

276.12

Chemical structure

Molecular Formula

C₉H₂N₄O₄Na₂

CAS Number

479347-85-8

PubChem identifier

2821

SMILES

C1=C(C(=CC2=C1N=C(C(=N2)[O-])[O-])[N+](=O)[O-])C#N.[Na+].[Na+]

Source

Synthetic

InChI

InChI=1S/C9H4N4O4.2Na/c10-3-4-1-5-6(2-7(4)13(16)17)12-9(15)8(14)11-5;/h1-2H,(H,11,14)(H,12,15);/q;2*+1/p-2

InChIKey

YCXDDPGRZKUGDG-UHFFFAOYSA-L

MDL number

MFCD09953908

Appearance

Brown or yellow solid
