Solubility overview	Soluble in 1.0% NH ₄ OH

Handling	Please note that this product is supplied as a lyophilized solid and may be very hard to visualize.
-----------------	---

Amyloid beta peptides are prone to aggregation and as such, there are a variety of published methods for handling amyloid beta peptides.

We recommend using NH₄OH with this product - you should use **1.0% NH₄OH** as the solvent followed by buffer (for example 1X PBS).

1. Add 1.0% NH₄OH directly to the lyophilized peptide (~70-80 μ l for 1mg of peptide). Do not store the peptide in 1.0% NH₄OH.
2. Immediately dilute your solution to a concentration of ~1mg/mL or less your buffer (e.g 1X PBS, water or an alternative buffer).
3. Vortex gently to mix (less than 1 minute).

Note: This method may not completely remove pre-aggregates. Vortexing may encourage seeding and further aggregation of the peptide.
