DATASHEET

β -Amyloid Peptide (1-40) (human)

Product overview

Name	β -Amyloid Peptide (1-40) (human)
Cat No	HB8758
Biological description	The β -Amyloid (1-40) peptide is one of the two main amyloid- β peptides implicated in Alzheimer's disease.
Alternative names	A β 1-40, A β 40
Biological action	Peptide
Purity	>95%
Description	β -Amyloid (1-40) protein fragment.

Biological Data

Application notes	Please see our Amyloid Beta Protocol

Solubility & Handling

Storage instructions	-20 °C
Solubility overview	Soluble in 1.0% NH ₄ OH
Handling	Please note that this product is supplied as a lyophilized solid and may be very hard to visualize. Amyloid beta peptides are prone to aggregation and as such, there are a variety of published methods for handling amyloid beta peptides. We recommend using NH₄OH with this product - you should use 1.0% NH₄OH as the solvent followed by buffer (for example 1X PBS). 1. Add 1.0% NH₄OH directly to the lyophilized peptide (~70-80 μl for 1mg of peptide). Do not store the peptide in 1.0% NH₄OH. 2. Immediately dilute your solution to a concentration of ~1mg/mL or less with 1X PBS or alternative buffer. 3. Vortex gently to mix (less than 1 minute). Note: This method may not completely remove pre-aggregates. Vortexing may encourage seeding and further aggregation of the peptide.
Important	This product is for RESEARCH USE ONLY and is not intended for therapeutic or diagnostic use. Not for human or veterinary use
