DATASHEET

Hoechst 33342 Staining Solution (10mg/ml)

Product overview

Name Hoechst 33342 Staining Solution (10mg/ml)

Cat No HB9888

Alternative names H33342, Bisbenzimide H 33342

Biological description 10mg/ml staining solution. Blue fluorescent DNA stain that is commonly used in fluorescent microscopy

and frequently used to stain nuclei and is cell permeable. Can be used on both live and fixed cells.

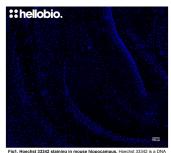

Solid powder form in 50mg and 100mg also available.

Biological action Description Dyes & stains

Blue fluorescent DNA stain. Nuclear stain. 10mg/ml staining solution in water. Solid also available in

50mg and 100mg.

Application notes

#Protocol 1: Hoechst 33342 staining of mouse brain sections.

- 400µm mouse brain sections were cut using a vibratome and were incubated in carbogen bubbled artificial cerebral spinal fluid (aCSF).
- Sections were incubated in 1µg/ml Hoechst 33342 in aCSF for 20 minutes at 37°C before being washed for 10 minutes in aCSF.
- Sections were imaged on a Leica SP8 AOBS confocal laser scanning microscope using the 405nm laser line.
