## DATASHEET

TMB ELISA Substrate (high sensitivity)

### Product overview

<b>Name</b>	TMB ELISA Substrate (high sensitivity)
<b>Cat No</b>	HB8566
<b>Biological description</b>	High sensitivity HRP substrate for use in colourmetric ELISAs. Upon reaction with HRP the TMB ELISA Substrate (high sensitivity) develops a blue color with absorbance at 650nm. Upon stopping the reaction with 0.16M sulphuric acid the color changes to yellow which can be read at 450nm.

Key features:

- High sensitivity and speed
- 48 month stability
- 1-5 minute read time
- Single component

<b>Biological action</b>	Reagent
<b>Applications</b>	ELISA
<b>Description</b>	High sensitivity HRP substrate for use in colorimetric ELISAs.

### Biological Data

Application notes

Protocol

1. Add 100  $\mu$ L of TMB ELISA Substrate (high sensitivity) to each ELISA well,
2. Incubate at room temperature for 1-5 minutes or until a visible color change has occurred. The absorbance can be measured at this point if required at 650nm,
3. Add 100 $\mu$ L of 0.16M sulphuric acid to each well to stop the reaction,
4. Measure absorbance at 450nm on a plate reader.

### Solubility & Handling

**Storage instructions**  
**Important**

+4 °C  
This product is for RESEARCH USE ONLY and is not intended for therapeutic or diagnostic use. Not for human or veterinary use.
