DATASHEET

TMB ELISA Substrate (high sensitivity)

Product overview

Name TMB ELISA Substrate (high sensitivity)

Cat No

Biological description High sensitivity HRP substrate for use in colourmetric ELISAs. Upon reaction with HRP the TMB

ELISA Substrate (high sensitivity) develops a blue color with absorbance at 650nm. Upon stopping the

reaction with 0.16M sulphuric acid the color changes to yellow which can be read at 450nm.

Key features:

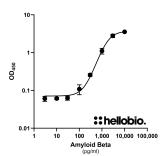

- · High sensitivity and speed
- 48 month stability
- 1-5 minute read time
- · Single component

Biological action Applications Description

Reagent **ELISA**

High sensitivity HRP substrate for use in colorimetric ELISAs.

Biological Data

Application notes Protocol

- 1. Add 100 µL of TMB ELISA Substrate (high sensitivity) to each ELISA well,
- 2. Incubate at room temperature for 1-5 minutes or until a visible color change has occured. The absorbance can be measured at this point if required at 650nm,
- 3. Add 100µL of 0.16M sulphuric acid to each well to stop the reaction,
- 4. Measure absorbance at 450nm on a plate reader.
