## DATASHEET

Thioflavin T (ThT)

### Product overview

<b>Name</b>	Thioflavin T (ThT)
<b>Cat No</b>	HB7143
<b>Biological description</b>	Cell-permeable fluorescent amyloid stain for <i>in vitro</i> amyloid beta staining in brain tissues. Used to detect amyloid fibrils and to study amyloid fibril structure and the mechanism by which they form. Stains insoluble senile A $\beta$ plaques, confirms formation of $\beta$ -sheet structure from mutant huntingtin exon-1 aggregates <i>in vitro</i> and may also be used to monitor polyglutamine amyloid formation of tNhtt-42Q aggregates in Huntington's diseases models <i>in vitro</i> .
<b>Alternative names</b>	Thioflavin T
<b>Biological action</b>	Dyes & stains
<b>Purity</b>	>95%
<b>Description</b>	Cell-permeable fluorescent amyloid stain

### Biological Data

<b>Application notes</b>	Please see our <a href="#">Amyloid Beta Protocol</a>
--------------------------	--

### Solubility & Handling

<b>Storage instructions</b>	-20 °C
<b>Solubility overview</b>	Soluble in water (10 mM), and in DMSO (5 mM)

<b>Important</b>	This product is for RESEARCH USE ONLY and is not intended for therapeutic or diagnostic use. Not for human or veterinary use
------------------	--

### Chemical Data

<b>Chemical name</b>	2-[4-(Dimethylamino)phenyl]-3,6-dimethylbenzothiazolium chloride
<b>Molecular Weight</b>	318.9
<b>Chemical structure</b>	The chemical structure of Thioflavin T (ThT) is shown as a 2D ball-and-stick model. It features a benzothiazolium ring system with a dimethylamino group at the 2-position and a 4-(dimethylaminophenyl) group at the 3-position. The counterion is a chloride ion (Cl <sup>-</sup> ).
<b>Molecular Formula</b>	C <sub>17</sub> H <sub>19</sub> ClN <sub>2</sub> S
<b>CAS Number</b>	2390-54-7
<b>PubChem identifier</b>	16853
<b>SMILES</b>	CC1=CC2=C(C=C1)[N+](=C(S2)C3=CC=C(C=C3)N(C)C)C.[Cl-]
<b>InChiKey</b>	JADVWWSKYZRXG-UHFFFAOYSA-M
<b>Appearance</b>	Yellow solid
